

**Supplemental data 2. Jab1 binds to L-Trb1, and the interaction is enhanced by T2.** Yeast growth of positive cells: Y2H Gold and Y187 yeast strains were co-transformed with pGBKT7+L-Trb1 and pGADT7+Jab1 plasmids, respectively, and seeded onto -QDO/X/A dropout media in the presence or absence of  $10^{-6}$  M T2. Representative image of the Y2H assay is shown (n=3).
