

Δ NTD L-TR β 1

Δ NTD L-TR β 1

Supplemental data 4. N-terminal domain of L-TR β 1 is required for T2- and Jab1-induced activation. Cells were co-transfected with a Δ NTD L-TR β 1-pcDNA 3.3 expressing vector, plus a SERCA-pGL3 vector and increasing amounts of Jab1- (*upper panel*) or Jab1A-pcDNA 3.3 expressing vector (*lower panel*) and treated with 10^{-7} M T2 or T3. Cells were lysed 24 h after transfection, and a DLR-ready Varioskan was used to perform luciferase assays. The results represent the mean \pm SEM of 3 independent experiments, each in triplicate.
