Supplementary Figure 2.

Effects of eplerenone on changes in the morphology of iWAT from chow or HFD-fed mice. Representative photomicrograph of HE staining in the iWAT and the averaged size of adipocytes are shown. Scale bar, 200 µm. Data are shown as the mean ± SEM (n = 6-9). **P < 0.01, significantly different from chow. ††P < 0.01, significantly different from HFD.
