

Supplemental Figure1. Effect of Cre expression on *Pdx1*^{+/-} mice. Four-week-old mice were injected with tamoxifen. Blood glucose levels were measured after intraperitoneal injection of dextrose (1g/kg) in the male mice on HFD for 12 weeks. **P<0.01, ***P<0.001 for *Pdx1*^{+/-}*Cre*⁺ mice compared to the *Cre*⁺ mice; (n=8-10). Values are mean ± SEM.
