**Supplementary Figure 17.** Measurement of protein levels of selected markers in HIB-1B adipocytes transfected with Stk25-specific siRNA or with NTC siRNA. Protein lysates were analyzed by Western blot. Representative Western blots are shown with actin used as a loading control. Protein levels in (B) were analyzed by densitometry and shown as bar histograms; the level of each protein in cells transfected with NTC is set to 1. Data are mean ± SEM from 7-8 wells per group.
