

Supplementary Figure 1

Supplementary Figure 1. Correlation between blood glucose levels and *Ifng* mRNA expression levels of spleen in the NOD::Keap1^{FA/+} and NOD::Keap1^{FA/-} mice at 24 weeks of age ($n=13$ in each group). The mRNA expression data were normalized to *Hprt*, and the expression levels in hyperglycemic NOD::Keap1^{FA/+} mice were set as 1.
